Maximum Marks	3 Marks

Problem Statements (Customer Problem Statement Template):

Many individuals applying for loans are uncertain about their chances of approval because loan decisions depend on factors such as income, credit history, employment status, and loan amount. This uncertainty can cause stress for applicants and increase the time required for loan evaluation. The Smart Lender system aims to solve this problem by using machine learning to predict loan eligibility, providing users with a quick and reliable assessment of their loan approval chances.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A loan applicant seeking financial assistance.	Check whether I am eligible for a loan.	I do not know if my application will be approved.	Loan approval depends on many financial factors.	Anxious and uncertain about my loan approval chances.
PS-2	A person applying for a personal or home loan.	Understand my eligibility before applying for a loan.	The approval process is time-consuming and unclear.	Different banks have different approval criteria.	Confused and worried about getting my loan approved.
