

Demonstration of Proposed Features

Date	30 June 2026
Team ID	
Project Name	Smart Lender
Maximum Marks	1 Mark

Demonstration of Proposed Features:

The **Smart Lender – Loan Prediction System** was developed based on the features identified during the project planning phase. Each feature was implemented, tested, and demonstrated to ensure that the application met the intended objectives. The successful implementation of these features highlights the system's ability to provide accurate loan predictions through a user-friendly web interface.

The following table summarizes the implementation status and demonstration of the proposed features.

S.No	Feature Name	Description	Status	Demonstrated	Remarks
1	Loan Application Form	Allows users to enter applicant and loan details through a web form.	Implemented	Yes	Successfully collects user input.
2	Data Preprocessing	Cleans, encodes, balances, and scales the dataset before model training.	Implemented	Yes	Improves model performance.
3	Machine Learning Model	Trains and compares multiple ML algorithms to predict loan approval.	Implemented	Yes	Random Forest selected as the best model.
4	Loan Prediction	Predicts whether the loan application is Approved or Rejected.	Implemented	Yes	Provides accurate real-time predictions.
5	Flask Web Application	Integrates the trained model with a user-friendly web interface.	Implemented	Yes	Successfully deployed and tested locally.
6	Result Display	Displays the loan prediction result with a clear approval or rejection message.	Implemented	Yes	User-friendly output page.

Feature Implementation Summary:

Metric	Value
Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6
