Data Flow Diagram

A Data Flow Diagram (DFD) is a graphical representation of how data moves through a system, showing the flow of information between users, processes, and data stores. In the Smart Lender – Loan Eligibility Prediction System, the DFD illustrates how the applicant provides personal, financial, and loan-related information to the system, which then validates and stores the data, processes it using a machine learning model, predicts the applicant's loan eligibility, and finally displays the result to the user. The diagram helps in understanding the overall workflow of the system and ensures a clear, efficient, and accurate loan eligibility prediction process.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	A person, organization, or system outside the project that sends or receives data (e.g., Customer, Payment Gateway).
Rectangle with numbered header	Process	An activity that transforms incoming data into outgoing data (e.g., Validate Request, Process Order).
Rectangle (solid fill, no number)	Data Store	A place where data is held for later use (e.g., Customer Database, Inventory).
Labeled arrow	Data Flow	The movement of data between entities, processes, and data stores, labeled with what data is being passed.

Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.
